Installation Guidelines

Advised heights:

Top of basin: 900mm AFFL

Bottle trap wall connection: 630-695mm AFFL

Wall taps: 1030mm AFFL

Material & Care Tips

Marblecast vanity basins and shower trays are made from a mixture of crushed marble and resin.

We use a ratio of 80% marble and 20% resin.

The material is mixed together and a small amount of catalyst is added.

The catalyst reacts with the resin and ensures that the resin polymerizes and hardens into a hard, strong mass.

This mass is then moulded into highly durable bathroom ware.

The product has been polished to a high gloss.

Clean with a soft cloth or sponge using soap or mild detergent and warm water.

The use of abrasive pads or chemical abrasives will dull the product over time.

The thermostat in the hot water cylinder should be set at 60–65 degrees Celsius.

It is recommended to first run cold water into the bowl with a plug followed by the hot water. This will allow the marble to warm up slowly and ensure the longevity and attractiveness of the product.

Stains can be removed by hand with a white polishing compound.
