SINTERED
SHOWER TRAYS

NEOLITH®
SINTERED STONE

Marblecast has partnered with Neolith® to present an all-new collection of shower trays designed to adapt to any style or place.

Sintered Stone is a 100% natural material based on granite minerals, glass minerals and natural oxides.

Our sintered shower trays are produced using the Ultra Slim manufacturing technology, a patented system that is unique to the market where the raw materials are molded to get a product that is only +/- 23 mm thick.

**INNOVATIVE
SHOWER TRAY
SOLUTIONS**

MARBLECAST PARTNERING WITH NEOLITH

SINTERING TECHNOLOGY: COMPACTING, RESISTANCE AND DURABILITY

With this cutting-edge technology, Neolith® shower trays can be curved to create progressive evacuation slopes designed to facilitate fast water evacuation (pursuant to ITC / UNE-EN 14527:2006 STANDARD + A1:2010 SECT. 5.2 certification).

SINTERED SHOWER TRAYS

BENEFITS

Shower trays are designed to adapt to any style or place. Design offers an effective way to combine shower trays with any style for an infinite number of solutions.

The raw materials are not altered at all during the production process which allows for a completely anti-slip finish with a pleasant texture as well as antibacterial and antimicrobial protection.

None of the tray properties are lost over time.

Colour remains unalterable and the product is resistant to stains, cleaning product acids and impacts.

Shower trays are easily installed due to the lightness of the single, compact and jointless Neolith® pieces.

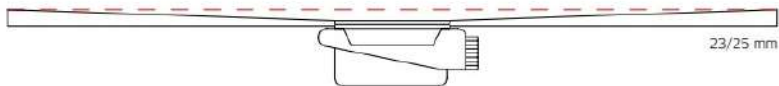

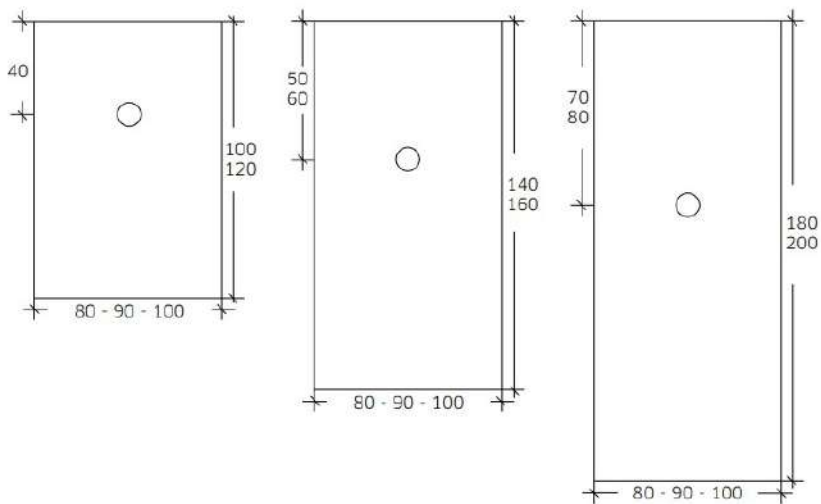

The possibility of installing flush with the floor makes this product ideal for handicapped or senior bathrooms.

The available colours range from the purest white to the darkest black along with all the rest of the Neolith® color range.

SHOWER TRAY FORMATS

Sintered shower trays come in different formats measuring 2000 x 1000 mm to 700x700mm, which means greater uniformity and continuity in different spaces for easier handling and to minimize the number of joints for more aesthetic and hygiene benefits.
